WAS SAMPLING CONDUCTED BY CONTRACTOR? NO

COMMENTS:

When Monsanto ceased operations in 1982, contam. sorbent mat'ls. were removed and the underlying soil was remediated. Although there is some soil contam., there are no people that live or work w/i 200' of the site prop. Some volatile and semi-volatile contam. was found in the on-site monitoring well. However based on the lack of GW use and low waste quantity, a NFRAP is recommended.
